

Lexmark Cloud Connector

The cloud is becoming a universal data repository, enabling users in multiple locations to quickly store and share files. The rise of cloud service providers has given business users an economical, secure, easy-to-use and intuitive option for file storage—advanced technology that is increasingly supplementing or even replacing local drives and servers.

Lexmark Cloud Connector is your organization's Lexmark-device-based interface to the ever-expanding cloud, connecting users effortlessly and securely to all their files. With Lexmark Cloud Connector, you are in total control of when and where you access, store and print your files and scans. There's no need for a smartphone, computer or tablet—just an e-Task equipped Lexmark multi- or single-function product (MFP/printer).

Easy registration, easy access

Following a simple registration process to ensure security, Lexmark Cloud Connector allows users to connect their device to a variety of cloud services: Box, Dropbox, Google Drive and OneDrive. Once registered, users can access and print from, or scan and upload to, their cloud service of choice.

Optimized for cloud success

Single-source connectivity: Connect to Box, Dropbox, Google Drive and OneDrive from a single solution.

Intuitive interface: Easily browse available cloud service file locations to print documents or store scans directly from e-Task screen.

File format versatility: "Scan to" or "Print from" all the file formats supported natively on the device.

Usability/Security: Each logged-in user will only see their registered accounts and accessible files. In addition, "Guest mode" allows multiple users to share a single security profile with PIN protection to limit each one's access.

Low maintenance: Lexmark Cloud Connector self-updates so you can always take advantage of its latest features.

Single solution, many possibilities

The on-ramp to digital transformation starts with converting hardcopy paper documents into a digital format, or making documents available to print on demand.

With Lexmark Cloud Connector, there's no need to courier paper documents between offices, search file cabinets for the right document, scan documents to a USB drive before uploading to the cloud or pre-print a variety of forms locally or through an outside vendor.

That's because Lexmark Cloud Connector enables and simplifies all these processes. Imagine the possibilities of connecting to popular, widely used cloud storage services through your Lexmark SFP or MFP:

Scan to cloud: Use the scanner on your Lexmark MFP to scan a paper document, or a whole stack of them, to a company-shared cloud drive for storage and retrieval.

Print on demand: Whatever you or a business associate has scanned to a cloud storage service provider, and made available for access, can be quickly retrieved and printed from any Lexmark device running Lexmark Cloud Connector.

Centralize and ensure consistency: Beyond scanned documents, you can develop documents and forms in any authoring environment, such as on your desktop computer, and upload them to your preferred cloud storage provider in any Lexmark-device-native format, such as PDF. Users you've set up with access to your cloud account can then retrieve and print them from any Lexmark device running Lexmark Cloud Connector.

Personalize and customize: Take advantage of Lexmark device features, such as image editing or processing, to customize printable cloud-based forms just as you would from a local scan.
